

SmartStyle thermo-laminated doors are designed to be generally low maintenance; however we do have some pointers for looking after them:

While SmartStyle doors and panels are water-resistant, they aren't waterproof. Care should be taken to ensure that they don't have excessive exposure to water, steam or extreme humidity. Care should also be taken to protect doors from high temperatures - such as hot implements or heat leaks from faulty appliances. Please also refer to our warranty for heat deflector information.

Generally you should clean doors with a warm damp cloth which has had the excess water removed. Any moisture remaining after cleaning should be removed with a dry cloth.

Do not use abrasive cloths or chemicals to clean your door, either front or back, wipe using a microfibre, soft cloth or chamois.
