

DIBOND®

DIBOND ALUMINIUM COMPOSITE

CARE AND MAINTENANCE

This product does not comply with AS 1530.1. Please discuss fire ratings and compliance with a fire engineer or industry professional. This product is classified as combustible.

✓ **WASHING**

We recommend the use of wash and wax products, suitable for motor vehicles. Brands include Auto Glym, Bowdens Wash, Wash and Wax and Meguiar's. These products are pH neutral.

Auto Glym Clay bar detailing kit to remove any pollution stains from the surface of the DIBOND.

DO NOT USE TRUCK WASH UNDER ANY CIRCUMSTANCES!

Truck Wash products are not pH neutral and can in fact damage the coating of your DIBOND.

We also recommend against the use of brushes as much as possible as brushes can carry debris that can damage the surface of your DIBOND when used.

✓ **POLISHING**

Polishing the surface of your caravan from time to time can assist in the long-term lustre of the DIBOND finish. Products suitable for motor vehicles are recommended, and both Auto Glym and Meguiar's have appropriate products.

DO NOT use polishing products that have a cutting agent as this can damage the finish of your DIBOND. If you need to use polishing products, only use products that are strictly a polish only.

✓ **MAINTENANCE**

We recommend the use of RV Protection products, particularly supplied by Vantec. We have undertaken extensive testing with Vantec and found that their RV Protection products do provide an excellent protection to the DIBOND surface and can assist in preventing fading and sun damage. For further information please visit their website: www.vantec.com.au

Should you have any further questions regarding the care and maintenance of DIBOND, please do not hesitate to contact the HVG team on 1300 854 166.
